

## Eye Surgeons & Consultants is the Trusted Choice for Locals and Physicians Alike

March 15, 2026 Article by: [Kyera Lutton](#) | [South Florida Favorites](#)

In medicine, there is no greater endorsement than earning the trust of fellow physicians. In South Florida, hundreds of doctors and their families have chosen Eye Surgeons & Consultants for their own eye care, a distinction that speaks volumes about the practice's stellar surgical and clinical expertise and its unparalleled reputation.

Celebrating 20 years of service, the physician-led ophthalmology practice has built a statewide reputation for advanced, no-stitch laser cataract surgery and a highly personalized patient experience. Since its inception, Eye Surgeons & Consultants has prided itself on ensuring that every patient visit, from initial consultation to post-operative follow-up, is overseen by one of the renowned eye physician specialists who personally examines each patient.

At the leadership of the practice is Medical Director, Alan Mendelsohn MD, FACS, a fellowship-trained specialist from the prestigious Bascom Palmer Eye Institute at the University of Miami. With more than 30 years of experience and over 30,000 cataract surgeries performed, Dr. Mendelsohn is widely recognized for his mastery of laser-assisted, no stitch cataract techniques, providing his patients with phenomenal visual results.

Unlike traditional methods, laser cataract surgery uses computer-guided precision to create incisions and soften the cataract, tremendously enhancing accuracy and promoting faster healing. The "no-stitch" approach ensures comfort and reduces recovery time while delivering exceptional visual outcomes.

For the past decade, in the operating room, Dr. Mendelsohn has concentrated exclusively on laser cataract surgery. Known for his hands-on involvement, he personally guides patients through pre-operative planning and post-operative care and always remains directly accessible for any questions or concerns. Every surgical patient is provided with Dr. Mendelsohn's personal cell phone number.

Working alongside him is Alec Chaleff MD, a board-certified cataract and refractive surgeon with extensive experience in femtosecond and laser-assisted procedures. Having performed more than 5,000 cataract surgeries, Dr. Chaleff specializes in premium intraocular lens technology, including the PanOptix Pro and Toric PanOptix Pro lenses. These advanced implants can significantly reduce, and almost always eliminate the need for glasses after surgery. In January '26, Dr. Chaleff performed laser cataract surgery on Dr. Mendelsohn's wife, Caryl, who has been ecstatic with her perfect 20/20 vision for distance, intermediate, and near vision without any correction from eyeglasses or contact lenses. Caryl was a high myope, wearing glasses from age 8 and contact lenses from age 12 until her recent bilateral, extraordinarily successful laser cataract surgery. Caryl, and thousands of delighted postoperative patients, now enjoy the best eyesight of their lifetimes due to Dr. Chaleff's impeccable surgical track record.

Completing the clinical team is Nathan Klein OD whose expertise spans advanced contact lenses, including scleral lenses for complex corneal conditions, scarring, dry eyes, or other ocular conditions making contact lens wear uncomfortable or unsatisfactory. Dr. Klein has extensive expertise and wonderful success stories utilizing scleral contact lenses for his delighted patients. Dr. Klein has special expertise in dry eye treatments, including collagen punctal plugs and Lacrifill enabling patients to be far more comfortable and productive. Nathan Klein OD also has a forte with pediatric myopia management, successfully minimizing the progression of myopia. His work enhances the quality of vision for patients requiring specialized fittings or non-surgical solutions.

While each physician brings distinct strengths, their overlapping expertise creates a seamless continuum of care. Patients benefit from collaborative decision-making and individualized treatment plans which are tailored to their specific visual goals. Despite its technological sophistication, the atmosphere at Eye Surgeons & Consultants is warm and welcoming. The practice avoids the impersonal feel often associated with high-tech medical centers. Instead, patients are greeted with personalized care and attention. Early morning and weekend appointments, bilingual services in English and Spanish, and physician accessibility, all reflect the practice's commitment to convenience and patient-centered care on every visit. The motto of Eye Surgeons & Consultants, which the eye physicians and staff conscientiously adhere to on a daily basis is "Your Vision is Our Focus!" The very detailed website for the practice [www.myeyesurgeons.com](http://www.myeyesurgeons.com) offers a wealth of information about the three eye physicians, services offered, and their respective specialty interests.

The commitment to superior vision extends beyond the laser procedures into the practice's high-end optical boutique, Emerald Eyes Optical. Emerald Eyes Optical distinguishes itself not merely through designer frames, but through the quality of its lenses. While many retail optical chains focus on fashion or price, this optical prioritizes optical precision, durability, and long-term eye protection.

Emerald Eyes, having earned the coveted "Essilor Experts" designation, manufactures its lenses in partnership with Essilor laboratories, where advanced coatings are integrated internally into the lens material rather than applied superficially after production. This integrated approach of embedding protective layers results in clearer optics, enhanced scratch resistance, and longer lasting performance.

Patients receive meaningful protection from UV radiation and high-energy visible blue light, which is particularly significant in sunny South Florida. Premium prescription sunglasses and progressive lenses are designed not only for style, but for superior depth of focus, contrast sensitivity, and ocular protection, unlike the vast majority of optical shops where the lenses have inferior quality of optics, especially for progressive lenses, and often negligible requisite UV and blue light protection.

Two decades after its founding, Eye Surgeons & Consultants continues to define what modern ophthalmology can be: technologically advanced, yet deeply personal; clinically rigorous yet welcoming. For patients seeking no-stitch laser cataract surgery, premium lens implants, or expertly crafted eyewear, the choice is clear. The practice's blend of surgical innovation, optical craftsmanship, and physician-led care has established it as a benchmark for excellence in South Florida.

In a field where vision is everything, Eye Surgeons & Consultants ensures patients see - and experience - the difference. With kindness, compassion, and honesty, it does its utmost to ensure that patient's will receive the best care possible.
